

Purchasing System Min Max

This area is optional if you would like Accredo to predict recommended re-order.

Manually you can update Min Max via the locations screen in a product. (Maintain>Inventory Control>Products>Location tab)

| Code | Name | Bin Lo... | Minimum | Maximum | In Stock | Allocated | Available |
|------|------|-----------|---------|---------|----------|-----------|-----------|
| 0000 | | | 6 | 21 | 895 | 13 | 882 |

Or you can **automate** this via the below

This will look at past average purchasing and add on a min/max figure based on a multiplier you choose.

You can limit the records shown via Product range and or Creditor to limit the product code selection.

The calculation can be self defined via:

- Select last period
- Average range is the number of periods prior to above to base average on.
- Add a multiplier for Min, and also for Max
- This calculation can be via period or days
- Press Run Query

| Code | Description | Unit | Avg Cost | Movement | Period Avg | Day Avg | Qty Available | Cur Min | Cur Max |
|------|-------------|------|----------|----------|------------|---------|---------------|---------|---------|
| | | | | | | | | | |

The system then calculates a min/max which you can edit/remove. Pressing Save will update the min/max on the product.
